

JAMES CARL ENQUIG

IT Student · Aspiring Web Developer · AI-Assisted Development

Ubay, Bohol, Philippines · jamescarlenquig26@gmail.com · github.com/Jamesss09

PROFILE

Fourth-year Information Technology student at Trinidad Municipal College with hands-on experience across the modern web stack — React and TypeScript on the frontend, PHP and Laravel on the backend. Currently deepening my focus on AI-assisted development: applying computer vision and deep learning to solve practical, real-world problems. Comfortable working end to end, from schema design to interface polish, and actively seeking an internship or collaboration where I can contribute and keep learning.

EDUCATION

Trinidad Municipal College	BS Information Technology · 4th Year (in progress)
Ubay, Bohol, Philippines	
- Capstone track: AI/ML-assisted systems development. - Core coursework spans web development, database systems, and IT fundamentals.	

PROJECTS

TMC Entrance Examination: Answer Sheet Recognition and Scoring System	Ongoing · Individual Capstone Project github.com/Jamesss09/Capstone
An end-to-end examination automation system that replaces manual grading. Answer sheets are captured through an Android camera or uploaded, recognized by a computer-vision model, scored against the official answer key as Passed/Failed, and the results are managed through a dedicated web platform. - Built the recognition pipeline in Python with PyTorch and OpenCV to detect and read handwritten answer bubbles from captured sheets. - Developed the results interface in React and Tailwind CSS, backed by a Laravel + MySQL service for exam keys, scores, and records. - Designed a mobile capture flow so sheets can be scanned on an Android device without specialized hardware.	

TECHNICAL SKILLS

FRONTEND React.js, JavaScript, TypeScript, Tailwind CSS	AI / ML PyTorch, OpenCV, model development (foundational)
BACKEND PHP, Laravel, Blade	SERVER / ENVIRONMENT Apache, Docker
DATABASE MySQL, PostgreSQL	VERSION CONTROL Git, GitHub
MOBILE React Native, Android	DESIGN Figma, UI/UX design fundamentals

CURRENT FOCUS & LEARNING

- Web Development — React, TypeScript, Tailwind, deployment
- UI/UX Design — design systems, layout, user flows
- Backend Development — Laravel, PHP, Blade, Docker
- AI / Models — exploring what is practical to build

Availability	Open to internships, freelance projects, and collaborations.
