

James Carl Enquig

Portfolio Layout — Royal Purple × Dark Plum

A modern, futuristic, developer-focused single-page portfolio concept with a fixed navigation sidebar, spacious content sections, subtle glow, glass-like cards, and a consistent Royal Purple / Dark Plum visual identity.

01 — Navigation Sidebar

A fixed vertical sidebar sits on the left. It creates a developer-dashboard feel instead of using a conventional top navigation. On mobile, it can become a hamburger menu or compact bottom navigation.

```

GitHub · LinkedIn
```

02 — Hero / Introduction

The hero is the first visual statement. The left side introduces James, while the right side contains a floating code window that reinforces the developer identity.

```
WELCOME TO MY PORTFOLIO

Hi, I'm
JAMES CARL ENQUIG
4th Year IT Student · Aspiring Web Developer

[ Explore My Journey ] [ Contact Me ]
```

The code window can display a small JavaScript object describing the developer, for example name, role, focus, and learning areas.

03 — About Me

Use a three-column composition: personal introduction on the left, key information in the center, and a professional photo or decorative visual on the right.

```
Key information: Name — James Carl Enquig · Age — 22 · Education — 4th Year IT Student · Focus
— Web Development & UI/UX Design
```

04 — Tech Stack

Present technologies as categorized cards instead of one long list. Each card can receive a subtle Royal Purple glow on hover.

Category	Technologies
Frontend	React.js · JavaScript · TypeScript
Mobile	React Native

Category	Technologies
Backend	PHP · Laravel
Database	MySQL · PostgreSQL
Server / Environment	Apache · Docker
Version Control	Git · GitHub
Design	Figma
AI / ML	Basic knowledge of AI and model development

05 — Projects

Because there are currently no completed projects, the first version should intentionally show a 'Currently Building' state instead of inventing work. When projects are completed, this area can become a project-card grid without changing the overall design.

CURRENTLY BUILDING

PROJECTS COMING SOON

Ideas → Code → Projects → Growth

[Coming Soon]

Future project cards can include a project image, title, short description, technology tags, and a View Project button.

06 — Learning Journey

Make this section personal by showing areas of active learning rather than presenting unverifiable skill percentages. A simple progress-style visual can communicate growth.

Web Development ●●●●●
Backend Development ●●●●■
UI/UX Design ●●●●■
AI / Models ●●●●■

07 — Contact

Finish with a visually stronger contact section using a large Royal Purple glow behind the content. Keep the call-to-action simple and provide GitHub, LinkedIn, and email links.

LET'S BUILD SOMETHING
TOGETHER

I'm always open to learning, collaborating and connecting.

Color System

Element	Hex
Main Background	#100718
Dark Plum	#1A0B24
Card Background	#21102E
Royal Purple	#6D28D9
Bright Purple	#8B5CF6
Soft Purple	#A78BFA
Main Text	#F5F3FF
Secondary Text	#A9A1B5
Border	#3B2050

Recommended Implementation

React + TypeScript + Tailwind CSS for the interface, with Framer Motion for subtle transitions and animations. The portfolio can remain frontend-only initially; a backend can be added later if features such as a contact form, blog, dashboard, or project management are needed.
